Warning: Divided flow computed for this cross-section.
Warning: The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than
         1.4.  This may indicate the need for additional cross sections.
Note:    Manning's n values were composited to a single value in the main channel.
Note:    Multiple critical depths were found at this location.  The critical depth with the lowest, valid, energy was used.

CROSS SECTION

RIVER: Rio Grande
REACH: Lower Reach        RS: 129.03

Warning: Divided flow computed for this cross-section.
Warning: The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4. This may indicate the need for additional cross sections.
Note: Manning's n values were composited to a single value in the main channel.
Note: Multiple critical depths were found at this location. The critical depth with the lowest, valid, energy was used.

Warning: Divided flow computed for this cross-section.
Warning: The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than
         1.4.  This may indicate the need for additional cross sections.
Note:    Manning's n values were composited to a single value in the main channel.
Note:    Multiple critical depths were found at this location.  The critical depth with the lowest, valid, energy was used.

Warning: Divided flow computed for this cross-section.
Warning: The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than
         1.4.  This may indicate the need for additional cross sections.
Note:    Manning's n values were composited to a single value in the main channel.
Note:    Multiple critical depths were found at this location.  The critical depth with the lowest, valid, energy was used.

Warning: Divided flow computed for this cross-section.
Warning: The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than
         1.4.  This may indicate the need for additional cross sections.
Note:    Manning's n values were composited to a single value in the main channel.
Note:    Multiple critical depths were found at this location.  The critical depth with the lowest, valid, energy was used.

Warning: The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4. This may indicate the need for additional cross sections.
Note: Manning's n values were composited to a single value in the main channel.
Note: Multiple critical depths were found at this location. The critical depth with the lowest, valid, energy was used.

Warning: The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4. This may indicate the need for additional cross sections.
Note: Manning's n values were composited to a single value in the main channel.
Note: Multiple critical depths were found at this location. The critical depth with the lowest, valid, energy was used.

Warning: The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4. This may indicate the need for additional cross sections.
Note: Manning's n values were composited to a single value in the main channel.
Note: Multiple critical depths were found at this location. The critical depth with the lowest, valid, energy was used.

Warning: The cross-section end points had to be extended vertically for the computed water surface.
Note: Manning's n values were composited to a single value in the main channel.
Note: Multiple critical depths were found at this location. The critical depth with the lowest, valid, energy was used.

Warning: Divided flow computed for this cross-section.
Note: Manning's n values were composited to a single value in the main channel.
Note: Multiple critical depths were found at this location. The critical depth with the lowest, valid, energy was used.

Warning: The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4. This may indicate the need for additional cross sections.
Note: Manning's n values were composited to a single value in the main channel.
Note: Multiple critical depths were found at this location. The critical depth with the lowest, valid, energy was used.

Warning: The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4. This may indicate the need for additional cross sections.
Note: Manning's n values were composited to a single value in the main channel.
Note: Multiple critical depths were found at this location. The critical depth with the lowest, valid, energy was used.

Warning: Divided flow computed for this cross-section.
Note: Manning's n values were composited to a single value in the main channel.
Note: Multiple critical depths were found at this location. The critical depth with the lowest, valid, energy was used.

Warning: Divided flow computed for this cross-section.
Warning: The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4. This may indicate the need for additional cross sections.
Note: Manning's n values were composited to a single value in the main channel.
Note: Multiple critical depths were found at this location. The critical depth with the lowest, valid, energy was used.

PROJECT DATA
Project Title: Lower Rio Grande
Project File : LowerRioGrande.prj
Run Date and Time: 10/3/2017 1:23:43 PM

Project in English units

Project Description:
Rio Grande Valley, Texas Fence Replacement
US Army Corps of Engineers Fort
Worth District
This model is not for public release until final
approval.
Last run date: October 3, 2017
HEC-RAS Version 5.0.3
The following
information was provided on the base model used for the duplicate effective
plan:
MARCH 2007

AN ADDITIONAL 70 XSECS THAT WERE SURVEYED ON MARCH 2007
WERE ADDED TO THE IBWC'S 2003 HECRAS BACKWATER MODEL. THE EARLIER 2003 MODEL'S
GEOMETRY WAS CONVERTED FROM 1929 DATUM TO CURRENT NAVD 88 DATUM.
THIS MODEL
WAS PREPARED USING HEC-RAS VERSION 4.0. THE FINAL PLAN MODEL ADDRESSED ASBUILT
CHANGES TO THE 2003 MODEL'S BRIDGES AT HIDALGO REYNOSA AND
PROGRESO

January
2003 (Earlier Model)

CURRENT MAINTENANCE WITH CONTROLLED GROWTH

HEC-RAS BACKWATER MODEL OF THE RIO GRANDE,
FROM BELOW BROWNSVILLE TO PEÑITAS.

This model used HEC-RAS Version 3.1.1.
Newer versions may give slightly different results.

River sections generally
surveyed during 1990. A few sections were surveyed earlier. This version
contains 24 additional sections with respect to the 1992 model, that were
surveyed in 2001.

Some of the geometry data at the dams, bridges, and
floodway inlets were taken from construction drawings and other sources.

The
flow of 235,000 cfs represents an attenuated flow from 250,000 cfs at Rio
Grande City. An additional 5000 cfs attenuation in the flood peak is assumed
to occur between Anzalduas Dam and Retamal Dam. Flows have been input to
simulate this attenuation. Flow diversions at the Main Floodway in the United
States and the Mexican Floodway are 105,000 cfs at each one, as agreed with
Mexico in Minute No. 238.

Starting elevation at River Mile 28 does not
include storm surge or tidal effects.

All elevations are referenced to Mean
Sea Level Datum.

The following description for the corrected effective plan
by Michael Baker International July 2017:
July 2017

The duplicate
effective river reach and cross-sections were re-cut using the 2008
IBWC-provided surface integrated with 2017 survey data (at cross-sections
145-139.85, 161.4- 160, and 155.2-135.5).

Reach lengths were approximated
between structures based on the duplicate effective model, then cross-sections,
and cross-section configurations were approximated using USIBWC-provided
hardcopy maps. Reach lengths for 169.83 and 169.49 were revised to 1300 feet,
and for 167.4 and 167 were revised to 2500 feet. Applied reach lengths were
imported from GeoRAS and not copied from Duplicate Effective Model, and the
reach was truncated at cross-section 112.2.

Cross-sections 186, 169.14,
169.12, 169.1, 156.93, 156.9, 156.87, 156.84, 151.27, 151.25, 129.23, 129.22,
129.216, 129.214, 129.213, 129.212, 129.211, 129.21, 120.62, 120.59, and 112.2;
and structures at river stations at 169.13, 156.915, 156.855, 151.255, 129.215,
and 120.605 were duplicated from the USIBWC 2008 model, except 169.14 was
elevated on the left bank to match the surface elevations.

Manning's
n-values, Contraction and expansion coefficients, blocked obstructions, levees,
and ineffective flow areas were approximated following associated duplicate
effective sections. Bathymetric stations and elevations were translated from
the associated duplicate effective cross-sections by graphical interpretations.

New cross-sections were placed at the beginning and ending of the proposed
floodwall. New cross-sections (excluding interpolated sections) include
180.32, 174, 172, 169.9, 166, 165, 163, 161.35, 161.3, 160, 159, 157.2, 155.2,
145.5, 145.2, 144.7, 144, 143.5, 143, 142, 141.5, 136.8, 136.2, 136, and 135.5.
Cross-sections 155.01, 154.6, 154.23, and 153.85 were extended on the left
bank to the levee. Bathymetric elevations, n-values, blocked obstructions,
levees, and ineffective flow areas for these new sections were placed based on
similar upstream or downstream cross-sections.

Cross-section 159.16 was
removed due to conflicts with new cross-sections and cross-sections downstream
of 112.2 were eliminated.

Control System Group: United States / State Plane
1983
Zone: Texas South 4205 (GROUND)
Datum Transformation: NAD 1983 (Conus)

Plan Description:
July 2017

The Duplicate Effective river reach and cross-sections were
re-cut using the 2008 IBWC-provided surface integrated with 2017 survey data
(at cross-sections 145-139.85).

Reach lengths were approximated between
structures based on the duplicate effective model, then cross-sections, and
cross-section configurations were approximated using USIBWC-provided hardcopy
maps. Reach lengths for 169.83 and 169.49 were revised to 1300 feet, and for
167.4 and 167 were revised to 2500 feet. Applied reach lengths were imported
from GeoRAS and not copied from Duplicate Effective Model, and the reach was
truncated at cross-section 112.2.

Cross-sections 186, 169.14, 169.12, 169.1,
156.93, 156.9, 156.87, 156.84, 151.27, 151.25, 129.23, 129.22, 129.216,
129.214, 129.213, 129.212, 129.211, 129.21, 120.62, 120.59, and 112.2; and
structures at river stations at 169.13, 156.915, 156.855, 151.255, 129.215, and
120.605 were duplicated from the USIBWC 2007 model.

Manning's n-values,
Contraction and expansion coefficients, blocked obstructions, levees, and
ineffective flow areas were approximated using engineering judgement.
Bathymetric elevations were not obtained with the 2017 survey. Bathymetric
stations and elevations were translated from the associated duplicate effective
cross-sections using engineering judgement.

New cross-sections were placed
at the begining and ending of the proposed floodwall. New cross-sections
include 180.32, 169.9, 161.35, 161.3, and 155.2. Bathymetric elevations,
n-values, blocked obstructions, levees, and ineffective flow areas for these
new sections were placed based on similar upstream or downstream
cross-sections.

Cross-section 159.16 was removed due to conflicts with new
cross-sections.
This model was prepared using HEC-RAS Version 5.0.3.

Coordinate system NAD 1983 State Plane Texas South FIPS 4205 Feet, Lambert
Conformal Conic projection.

Plan Summary Information:
Number of: Cross Sections = 234 Multiple Openings = 0
Culverts = 0 Inline Structures = 2
Bridges = 4 Lateral Structures = 0

Computational Information
Water surface calculation tolerance = 0.01
Critical depth calculation tolerance = 0.01
Maximum number of iterations = 20
Maximum difference tolerance = 0.3
Flow tolerance factor = 0.001

Computation Options
Critical depth computed only where necessary
Conveyance Calculation Method: At breaks in n values only
Friction Slope Method: Average Conveyance
Computational Flow Regime: Subcritical Flow

Warning: The cross-section end points had to be extended vertically for the computed water surface.
Note: Manning's n values were composited to a single value in the main channel.
Note: Multiple critical depths were found at this location. The critical depth with the lowest, valid, energy was used.

Warning: The cross-section end points had to be extended vertically for the computed water surface.
Note:    Manning's n values were composited to a single value in the main channel.
Note:    Multiple critical depths were found at this location.  The critical depth with the lowest, valid, energy was used.

Warning: The cross-section end points had to be extended vertically for the computed water surface.
Note: Manning's n values were composited to a single value in the main channel.
Note: Multiple critical depths were found at this location. The critical depth with the lowest, valid, energy was used.

Warning: The cross-section end points had to be extended vertically for the computed water surface.
Note:    Manning's n values were composited to a single value in the main channel.
Note:    Multiple critical depths were found at this location.  The critical depth with the lowest, valid, energy was used.

Warning: The cross-section end points had to be extended vertically for the computed water surface.
Warning: The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than
         1.4.  This may indicate the need for additional cross sections.
Note:    Multiple critical depths were found at this location.  The critical depth with the lowest, valid, water surface was used.

CROSS SECTION

RIVER: Rio Grande
REACH: Lower Reach        RS: 180.3

Warning: The cross-section end points had to be extended vertically for the computed water surface.
Note:    Manning's n values were composited to a single value in the main channel.
Note:    Multiple critical depths were found at this location.  The critical depth with the lowest, valid, water surface was used.

Warning: The cross-section end points had to be extended vertically for the computed water surface.
Note:    Manning's n values were composited to a single value in the main channel.
Note:    Multiple critical depths were found at this location.  The critical depth with the lowest, valid, energy was used.

Warning: The cross-section end points had to be extended vertically for the computed water surface.
Note:    Manning's n values were composited to a single value in the main channel.
Note:    Multiple critical depths were found at this location.  The critical depth with the lowest, valid, energy was used.

Warning: The cross-section end points had to be extended vertically for the computed water surface.
Note: Manning's n values were composited to a single value in the main channel.
Note: Multiple critical depths were found at this location. The critical depth with the lowest, valid, energy was used.

Warning: The cross-section end points had to be extended vertically for the computed water surface.
Note:    Manning's n values were composited to a single value in the main channel.
Note:    Multiple critical depths were found at this location.  The critical depth with the lowest, valid, energy was used.

Warning: The cross-section end points had to be extended vertically for the computed water surface.
Note:    Manning's n values were composited to a single value in the main channel.
Note:    Multiple critical depths were found at this location.  The critical depth with the lowest, valid, energy was used.

Warning: The cross-section end points had to be extended vertically for the computed water surface.
Warning: The velocity head has changed by more than 0.5 ft (0.15 m).  This may indicate the need for additional cross
         sections.
```

Note: Multiple critical depths were found at this location. The critical depth with the lowest, valid, energy was used.

CROSS SECTION

RIVER: Rio Grande
REACH: Lower Reach RS: 174.2

INPUT
Description: RGV-03, Bathymetric elevations translated from IBWC 2008

Warning: The cross-section end points had to be extended vertically for the computed water surface.
Note:    Manning's n values were composited to a single value in the main channel.
Note:    Multiple critical depths were found at this location.  The critical depth with the lowest, valid, energy was used.

Warning: The cross-section end points had to be extended vertically for the computed water surface.
Note:    Manning's n values were composited to a single value in the main channel.
Note:    Multiple critical depths were found at this location.  The critical depth with the lowest, valid, energy was used.

Warning: The cross-section end points had to be extended vertically for the computed water surface.
Note:    Manning's n values were composited to a single value in the main channel.
Note:    Multiple critical depths were found at this location.  The critical depth with the lowest, valid, energy was used.

Warning: The velocity head has changed by more than 0.5 ft (0.15 m).  This may indicate the need for additional cross
         sections.
Note:    Multiple critical depths were found at this location.  The critical depth with the lowest, valid, energy was used.

Warning: Divided flow computed for this cross-section.
Warning: The velocity head has changed by more than 0.5 ft (0.15 m).  This may indicate the need for additional cross
         sections.
Note:    Multiple critical depths were found at this location.  The critical depth with the lowest, valid, energy was used.

C & E Loss (ft)	0.24	Cum SA (acres)	23041.21	2880.49	25549.25	

Warning: The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross sections.
Warning: The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4. This may indicate the need for additional cross sections.
Warning: The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate the need for additional cross sections.
Note: Manning's n values were composited to a single value in the main channel.
Note: Multiple critical depths were found at this location. The critical depth with the lowest, valid, energy was used.

Warning: Divided flow computed for this cross-section.
Warning: The velocity head has changed by more than 0.5 ft (0.15 m).  This may indicate the need for additional cross
         sections.
Note:    Manning's n values were composited to a single value in the main channel.
Note:    Multiple critical depths were found at this location.  The critical depth with the lowest, valid, energy was used.

CROSS SECTION

RIVER: Rio Grande
REACH: Lower Reach        RS: 169.9

Warning: Divided flow computed for this cross-section.
Warning: The velocity head has changed by more than 0.5 ft (0.15 m).  This may indicate the need for additional cross
         sections.
Warning: The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than
         1.4.  This may indicate the need for additional cross sections.
Note:    Multiple critical depths were found at this location.  The critical depth with the lowest, valid, energy was used.

Warning: The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than
         1.4.  This may indicate the need for additional cross sections.
Note:    Manning's n values were composited to a single value in the main channel.
Note:    Multiple critical depths were found at this location.  The critical depth with the lowest, valid, energy was used.

Warning: The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than
         1.4.  This may indicate the need for additional cross sections.
Warning: The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section.  This may indicate
         the need for additional cross sections.
Note:    Manning's n values were composited to a single value in the main channel.
Note:    Multiple critical depths were found at this location.  The critical depth with the lowest, valid, energy was used.

CROSS SECTION

RIVER: Rio Grande
REACH: Lower Reach        RS: 168

Warning: The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than
         1.4.  This may indicate the need for additional cross sections.
Note:    Manning's n values were composited to a single value in the main channel.
Note:    Multiple critical depths were found at this location.  The critical depth with the lowest, valid, energy was used.

Warning: The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than
         1.4.  This may indicate the need for additional cross sections.
Note:    Manning's n values were composited to a single value in the main channel.
Note:    Multiple critical depths were found at this location.  The critical depth with the lowest, valid, energy was used.

Warning: The cross-section end points had to be extended vertically for the computed water surface.
Note:    Manning's n values were composited to a single value in the main channel.
Note:    Multiple critical depths were found at this location.  The critical depth with the lowest, valid, energy was used.

Warning: Divided flow computed for this cross-section.
Warning: The cross-section end points had to be extended vertically for the computed water surface.
Warning: The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than
         1.4.  This may indicate the need for additional cross sections.
Note:    Manning's n values were composited to a single value in the main channel.
Note:    Multiple critical depths were found at this location.  The critical depth with the lowest, valid, energy was used.

CROSS SECTION

RIVER: Rio Grande
REACH: Lower Reach        RS: 161.4

INPUT
Description: Updated on left with new survey to Station 1032.71, extended
             cross-section and block obstruction, Bathymetric elevations

Warning: The cross-section end points had to be extended vertically for the computed water surface.
Note:    Multiple critical depths were found at this location.  The critical depth with the lowest, valid, energy was used.

Warning: Divided flow computed for this cross-section.
Warning: The cross-section end points had to be extended vertically for the computed water surface.
Note: Manning's n values were composited to a single value in the main channel.
Note: Multiple critical depths were found at this location. The critical depth with the lowest, valid, energy was used.

Warning: Divided flow computed for this cross-section.
Warning: The cross-section end points had to be extended vertically for the computed water surface.
Note:    Manning's n values were composited to a single value in the main channel.
Note:    Multiple critical depths were found at this location.  The critical depth with the lowest, valid, energy was used.

Warning: Divided flow computed for this cross-section.
Warning: The cross-section end points had to be extended vertically for the computed water surface.
Warning: The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than
         1.4.  This may indicate the need for additional cross sections.
Note:    Manning's n values were composited to a single value in the main channel.
Note:    Multiple critical depths were found at this location.  The critical depth with the lowest, valid, energy was used.

Warning: The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section.  This may indicate
         the need for additional cross sections.
Note:    Manning's n values were composited to a single value in the main channel.
Note:    Multiple critical depths were found at this location.  The critical depth with the lowest, valid, energy was used.

Warning: The cross-section end points had to be extended vertically for the computed water surface.
Note:    Manning's n values were composited to a single value in the main channel.
Note:    Multiple critical depths were found at this location.  The critical depth with the lowest, valid, energy was used.

Warning: The cross-section end points had to be extended vertically for the computed water surface.
Warning: The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than
         1.4.  This may indicate the need for additional cross sections.
Note:    Manning's n values were composited to a single value in the main channel.
Note:    Multiple critical depths were found at this location.  The critical depth with the lowest, valid, water surface was used.

Number of Bridge Coefficient Sets =  1

Low Flow Methods and Data
       Energy
Selected Low Flow Methods = Highest Energy Answer

High Flow Method
       Energy Only

Additional Bridge Parameters
       Add Friction component to Momentum
       Do not add Weight component to Momentum
       Class B flow critical depth computations use critical depth
           inside the bridge at the upstream end
       Criteria to check for pressure flow = Upstream energy grade line

Warning: The cross-section end points had to be extended vertically for the computed water surface.
Warning: The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4. This may indicate the need for additional cross sections.
Note: Manning's n values were composited to a single value in the main channel.
Note: Multiple critical depths were found at this location. The critical depth with the lowest, valid, water surface was used.

Warning: The cross-section end points had to be extended vertically for the computed water surface.
Warning: The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross sections.
Warning: The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4. This may indicate the need for additional cross sections.
Note: Manning's n values were composited to a single value in the main channel.
Note: Multiple critical depths were found at this location. The critical depth with the lowest, valid, energy was used.

Warning: The cross-section end points had to be extended vertically for the computed water surface.
Note:    Manning's n values were composited to a single value in the main channel.
Note:    Multiple critical depths were found at this location.  The critical depth with the lowest, valid, energy was used.

Warning: The cross-section end points had to be extended vertically for the computed water surface.
Note: Manning's n values were composited to a single value in the main channel.
Note: Multiple critical depths were found at this location. The critical depth with the lowest, valid, energy was used.

Warning: The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4. This may indicate the need for additional cross sections.
Note: Multiple critical depths were found at this location. The critical depth with the lowest, valid, energy was used.

Warning: Divided flow computed for this cross-section.
Warning: The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section.  This may indicate
         the need for additional cross sections.
Note:    Manning's n values were composited to a single value in the main channel.
Note:    Multiple critical depths were found at this location.  The critical depth with the lowest, valid, energy was used.

CROSS SECTION

RIVER: Rio Grande
REACH: Lower Reach        RS: 154.23

INPUT
Description: RGV-04, 6-foot wall applied with 10:1 SS, Bathymetric elevations
             translated from IBWC 2008 Cross-sections

Warning: Divided flow computed for this cross-section.
Warning: The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate the need for additional cross sections.
Note: Manning's n values were composited to a single value in the main channel.
Note: Multiple critical depths were found at this location. The critical depth with the lowest, valid, energy was used.

Warning: The cross-section end points had to be extended vertically for the computed water surface.
Warning: The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than
         1.4.  This may indicate the need for additional cross sections.
Note:    Manning's n values were composited to a single value in the main channel.
Note:    Multiple critical depths were found at this location.  The critical depth with the lowest, valid, energy was used.

Warning: The cross-section end points had to be extended vertically for the computed water surface.
Note:    Multiple critical depths were found at this location.  The critical depth with the lowest, valid, energy was used.

Warning: The cross-section end points had to be extended vertically for the computed water surface.
Warning: The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than
         1.4.  This may indicate the need for additional cross sections.
Note:    Manning's n values were composited to a single value in the main channel.
Note:    Multiple critical depths were found at this location.  The critical depth with the lowest, valid, energy was used.
```

Warning: The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than
         1.4.  This may indicate the need for additional cross sections.
Note:    Manning's n values were composited to a single value in the main channel.
Note:    Multiple critical depths were found at this location.  The critical depth with the lowest, valid, energy was used.

Note:    Manning's n values were composited to a single value in the main channel.
Note:    Multiple critical depths were found at this location.  The critical depth with the lowest, valid, energy was used.

CROSS SECTION

RIVER: Rio Grande
REACH: Lower Reach        RS: 151.49

INPUT
Description: RGV-04, 8-foot wall applied.  Bathymetric elevations translated
             from IBWC 2008 Cross-sections

Warning: The cross-section end points had to be extended vertically for the computed water surface.
Note:    Manning's n values were composited to a single value in the main channel.
Note:    Multiple critical depths were found at this location.  The critical depth with the lowest, valid, water surface was used.

CROSS SECTION

RIVER: Rio Grande
REACH: Lower Reach        RS: 151.24

INPUT
Description: RGV-04, 9-foot wall applied, Bathymetric elevations translated
             from IBWC 2008 Cross-sections

Warning: The cross-section end points had to be extended vertically for the computed water surface.
Note:    Manning's n values were composited to a single value in the main channel.
Note:    Multiple critical depths were found at this location.  The critical depth with the lowest, valid, energy was used.

Warning: The cross-section end points had to be extended vertically for the computed water surface.
Note:    Manning's n values were composited to a single value in the main channel.
Note:    Multiple critical depths were found at this location.  The critical depth with the lowest, valid, energy was used.

Warning: The cross-section end points had to be extended vertically for the computed water surface.
Note:    Manning's n values were composited to a single value in the main channel.
Note:    Multiple critical depths were found at this location.  The critical depth with the lowest, valid, energy was used.

Warning: The cross-section end points had to be extended vertically for the computed water surface.
Note:    Manning's n values were composited to a single value in the main channel.
Note:    Multiple critical depths were found at this location.  The critical depth with the lowest, valid, energy was used.

CROSS SECTION

RIVER: Rio Grande
REACH: Lower Reach        RS: 145.2

Warning: The cross-section end points had to be extended vertically for the computed water surface.
Note:    Manning's n values were composited to a single value in the main channel.
Note:    Multiple critical depths were found at this location.  The critical depth with the lowest, valid, energy was used.
```

Warning: The cross-section end points had to be extended vertically for the computed water surface.
Note: Manning's n values were composited to a single value in the main channel.
Note: Multiple critical depths were found at this location. The critical depth with the lowest, valid, energy was used.

CROSS SECTION

RIVER: Rio Grande
REACH: Lower Reach RS: 144.7

INPUT
Description: RGV-01, new cross-section, Bathymetric elevations translated from
IBWC 2008 Cross-sections, Section along left levee updated with

Warning: The cross-section end points had to be extended vertically for the computed water surface.
Note:    Manning's n values were composited to a single value in the main channel.
Note:    Multiple critical depths were found at this location.  The critical depth with the lowest, valid, energy was used.

Warning: The cross-section end points had to be extended vertically for the computed water surface.
Warning: The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than
         1.4.  This may indicate the need for additional cross sections.
Note:    Manning's n values were composited to a single value in the main channel.
Note:    Multiple critical depths were found at this location.  The critical depth with the lowest, valid, energy was used.

Warning: The cross-section end points had to be extended vertically for the computed water surface.
Note: Manning's n values were composited to a single value in the main channel.
Note: Multiple critical depths were found at this location. The critical depth with the lowest, valid, energy was used.

CROSS SECTION

RIVER: Rio Grande
REACH: Lower Reach RS: 143.5

INPUT
Description: RGV-01, new cross-section, Bathymetric elevations translated from
IBWC 2008 Cross-sections, Section along left levee updated with
2017 survey

Warning: The cross-section end points had to be extended vertically for the computed water surface.
Note:    Manning's n values were composited to a single value in the main channel.
Note:    Multiple critical depths were found at this location.  The critical depth with the lowest, valid, energy was used.

Warning: The cross-section end points had to be extended vertically for the computed water surface.
Note:    Manning's n values were composited to a single value in the main channel.
Note:    Multiple critical depths were found at this location.  The critical depth with the lowest, valid, energy was used.

Warning: The cross-section end points had to be extended vertically for the computed water surface.
Note:    Manning's n values were composited to a single value in the main channel.
Note:    Multiple critical depths were found at this location.  The critical depth with the lowest, valid, energy was used.

CROSS SECTION

RIVER: Rio Grande
```

REACH: Lower Reach RS: 142.5

INPUT
Description: RGV-01. Bathymetric elevations translated from IBWC 2008
Cross-sections, Section along left levee updated with 2017 survey
Station Elevation Data num= 485

Warning: The cross-section end points had to be extended vertically for the computed water surface.
Note: Multiple critical depths were found at this location. The critical depth with the lowest, valid, energy was used.

CROSS SECTION

RIVER: Rio Grande
REACH: Lower Reach RS: 142

INPUT
Description: RGV-01, new cross-section, Bathymetric elevations translated from
IBWC 2008 Cross-sections, Section along left levee updated with
2017 survey
Station Elevation Data num= 475

Warning: The cross-section end points had to be extended vertically for the computed water surface.
Note:    Manning's n values were composited to a single value in the main channel.
Note:    Multiple critical depths were found at this location.  The critical depth with the lowest, valid, energy was used.

Warning: The cross-section end points had to be extended vertically for the computed water surface.
Note:    Multiple critical depths were found at this location.  The critical depth with the lowest, valid, energy was used.

Warning: The cross-section end points had to be extended vertically for the computed water surface.
Warning: The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4. This may indicate the need for additional cross sections.
Note: Manning's n values were composited to a single value in the main channel.
Note: Multiple critical depths were found at this location. The critical depth with the lowest, valid, energy was used.

Warning: The cross-section end points had to be extended vertically for the computed water surface.
Note:    Manning's n values were composited to a single value in the main channel.
Note:    Multiple critical depths were found at this location.  The critical depth with the lowest, valid, water surface was used.

Warning: The cross-section end points had to be extended vertically for the computed water surface.
Warning: The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than
         1.4.  This may indicate the need for additional cross sections.
Note:    Manning's n values were composited to a single value in the main channel.
Note:    Multiple critical depths were found at this location.  The critical depth with the lowest, valid, energy was used.

Warning: The cross-section end points had to be extended vertically for the computed water surface.
Note:    Manning's n values were composited to a single value in the main channel.
Note:    Multiple critical depths were found at this location.  The critical depth with the lowest, valid, energy was used.

Warning: The cross-section end points had to be extended vertically for the computed water surface.
Note: Manning's n values were composited to a single value in the main channel.
Note: Multiple critical depths were found at this location. The critical depth with the lowest, valid, energy was used.

Warning: The cross-section end points had to be extended vertically for the computed water surface.
Note:    Manning's n values were composited to a single value in the main channel.
Note:    Multiple critical depths were found at this location.  The critical depth with the lowest, valid, energy was used.

Warning: The cross-section end points had to be extended vertically for the computed water surface.
Note:    Manning's n values were composited to a single value in the main channel.
Note:    Multiple critical depths were found at this location.  The critical depth with the lowest, valid, energy was used.

Warning: The cross-section end points had to be extended vertically for the computed water surface.
Note:    Manning's n values were composited to a single value in the main channel.
Note:    Multiple critical depths were found at this location.  The critical depth with the lowest, valid, energy was used.

Warning: The cross-section end points had to be extended vertically for the computed water surface.
Note:    Manning's n values were composited to a single value in the main channel.
Note:    Multiple critical depths were found at this location.  The critical depth with the lowest, valid, energy was used.

Warning: The cross-section end points had to be extended vertically for the computed water surface.
Note:    Manning's n values were composited to a single value in the main channel.
Note:    Multiple critical depths were found at this location.  The critical depth with the lowest, valid, energy was used.

CROSS SECTION

RIVER: Rio Grande
REACH: Lower Reach RS: 132.75

INPUT
Description: Cross-Section data supplemented on the right by IBWC cross-section 132.75 from station 6897. 6897=7001-140 feet (the approximate difference at the relative bank stations). Bathymetric elevations translated from IBWC 2008 Cross-sections
Station Elevation Data num= 460

Warning: The cross-section end points had to be extended vertically for the computed water surface.
Note:    Manning's n values were composited to a single value in the main channel.
Note:    Multiple critical depths were found at this location.  The critical depth with the lowest, valid, energy was used.

CROSS SECTION

RIVER: Rio Grande
REACH: Lower Reach RS: 131.6

INPUT
Description: Cross-Section data supplemented on the right by IBWC cross-section
131.6 from right bank station. 2302.82=3380-1077.18 feet (the
approximate difference at the relative bank stations). Bathymetric
elevations translated from IBWC 2008 Cross-sections

Station Elevation Data num= 459

Warning: The cross-section end points had to be extended vertically for the computed water surface.
Note:    Manning's n values were composited to a single value in the main channel.
Note:    Multiple critical depths were found at this location.  The critical depth with the lowest, valid, energy was used.

Warning: The cross-section end points had to be extended vertically for the computed water surface.
Warning: The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than
         1.4.  This may indicate the need for additional cross sections.
Note:    Manning's n values were composited to a single value in the main channel.
Note:    Multiple critical depths were found at this location.  The critical depth with the lowest, valid, energy was used.

Warning: Divided flow computed for this cross-section.
Warning: The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than
         1.4.  This may indicate the need for additional cross sections.
Note:    Manning's n values were composited to a single value in the main channel.
Note:    Multiple critical depths were found at this location.  The critical depth with the lowest, valid, energy was used.

Warning: Divided flow computed for this cross-section.
Warning: The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4. This may indicate the need for additional cross sections.
Note: Manning's n values were composited to a single value in the main channel.
Note: Multiple critical depths were found at this location. The critical depth with the lowest, valid, energy was used.

Warning: Divided flow computed for this cross-section.
Warning: The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than
         1.4.  This may indicate the need for additional cross sections.
Note:    Manning's n values were composited to a single value in the main channel.
Note:    Multiple critical depths were found at this location.  The critical depth with the lowest, valid, energy was used.

CROSS SECTION

RIVER: Rio Grande
REACH: Lower Reach        RS: 127.4

INPUT
Description: RGV-02. 8-foot wall applied with 10:1 SS, Bathymetric elevations
             translated from IBWC 2008 Cross-sections

Warning: Divided flow computed for this cross-section.
Warning: The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4. This may indicate the need for additional cross sections.
Note: Manning's n values were composited to a single value in the main channel.
Note: Multiple critical depths were found at this location. The critical depth with the lowest, valid, energy was used.

Warning: The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than
         1.4.  This may indicate the need for additional cross sections.
Note:    Manning's n values were composited to a single value in the main channel.
Note:    Multiple critical depths were found at this location.  The critical depth with the lowest, valid, energy was used.

Number of Bridge Coefficient Sets = 1

Low Flow Methods and Data
Energy
Selected Low Flow Methods = Highest Energy Answer

High Flow Method
Energy Only

Additional Bridge Parameters
Add Friction component to Momentum
Do not add Weight component to Momentum
Class B flow critical depth computations use critical depth
inside the bridge at the upstream end
Criteria to check for pressure flow = Upstream energy grade line

Warning: The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4. This may indicate the need for additional cross sections.
Note: Manning's n values were composited to a single value in the main channel.
Note: Multiple critical depths were found at this location. The critical depth with the lowest, valid, energy was used.

Warning: The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4. This may indicate the need for additional cross sections.
Note: Manning's n values were composited to a single value in the main channel.
Note: Multiple critical depths were found at this location. The critical depth with the lowest, valid, energy was used.

Warning: The cross-section end points had to be extended vertically for the computed water surface.
Note:    Manning's n values were composited to a single value in the main channel.
Note:    Multiple critical depths were found at this location.  The critical depth with the lowest, valid, energy was used.

Warning: Divided flow computed for this cross-section.
Note: Manning's n values were composited to a single value in the main channel.
Note: Multiple critical depths were found at this location. The critical depth with the lowest, valid, energy was used.

Warning: The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4. This may indicate the need for additional cross sections.
Note: Manning's n values were composited to a single value in the main channel.
Note: Multiple critical depths were found at this location. The critical depth with the lowest, valid, energy was used.

Warning: The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4. This may indicate the need for additional cross sections.
Note: Manning's n values were composited to a single value in the main channel.
Note: Multiple critical depths were found at this location. The critical depth with the lowest, valid, energy was used.

Warning: Divided flow computed for this cross-section.
Warning: The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than
         1.4.  This may indicate the need for additional cross sections.
Note:    Manning's n values were composited to a single value in the main channel.
Note:    Multiple critical depths were found at this location.  The critical depth with the lowest, valid, energy was used.
